

Available on the  
**App Store**

# Fast. Intuitive. Anywhere.

**houseinhand**<sup>®</sup>

KNX Control in your iPhone, iPod Touch and iPad

# No server required.

Houseinhand® provides a fully bidirectional integration of KNX installations into iOS devices. Houseinhand® connects directly to any KNX installation via KNX IP router or gateway allowing, unlike other server based solutions, instantaneous communication to all the KNX devices of your house even when you are away.

KNX IP Router

# Everything. Everywhere.

Houseinhand® allows controlling a variety of home automation devices like shutters, lights, dimmers, climate, weather stations, RGB lights, central functions and KNX scenes.

Two widgets (generic 8 bits and generic 1 bit) allow the system integrator to integrate even more devices. For instance, it is possible to create up to 5 scenes/values selector with the 8 bits generic widget.

Climate

Lights

RGB

Shutters/8bit

The iPad version adds some functionalities like background pictures, themes, 2 columns layout and much more.

# More than KNX.

HouseinHand® enables to control also audiovisual decks like: TV sets, projectors, audio decks, iPod stations, IP Cameras like **AXIS®** and **Robotix®** and video intercom systems. Everything being managed from a single, stylish, powerful and reliable terminal.

Audiovisual IR handled decks can be controlled by Houseinhand® using:

- **IRTrans®**: <http://www.irtrans.com/en/index.php>
- **Global Cache®**: <http://www.globalcache.com>

## Environments.

HouseinHand® provides a rich experience with the possibility to create different environments. Environments are scenes that are configured by the end user according to its lifestyle. For example: "Coming Home", "Party" or "Romantic dinner".

# How to get it.

Try Houseinhand® for free in few steps:

- 1) Download **Houseinhand® KNX** from the App Store (free download).
- 2) Download **Houseinhand® Designer** and manuals ([www.houseinhand.com](http://www.houseinhand.com))
- 3) Create a **.cfg** file with up to 6 devices with Houseinhand® Designer. Export and send it by email. Open it from iPhone/iPads mail app and choose "Open with Houseinhand".
- 4) Launch Houseinhand® KNX app and test it.

Once successfully tested, you can complete your .cfg project and ask for a license.

All information you may require is available in two separate manuals: user manual (end user) and configuration manual (system integrator).

Houseinhand® KNX is currently available in: English, French, German, Spanish, Catalan, Italian, Portuguese and Czech. Many more are coming soon...

*Without license, when you are out of home, the bus writing function is disabled. Anyway, you will still be able to read its status. (i.e. you can check the room temperature but you cannot change it)*
